

Hi Bella. I thought that overall your paper addressed an important and gave multiple well thought out solutions, and was clearly directed to a particular audience who has influence within the IT department at UMD; However, I believe that the weaknesses primarily lie in organizational and sentence structures.

Audience: Your report is clearly directed at a particular audience, though as an external audience I have no idea who you are talking to. It would be helpful to mention or clarify on a front page who you are talking to, even if it's directed to them. What is ITAC? Mention the full name of the organization first, and then you can abbreviate the rest of the way. It's good that you are direct with this person though, using second-person words and making references to people and things they would know.

Overall Cohesion: I believe paragraphs could be better rearranged to move important information to the beginning rather than after qualification. The solution was introduced at the end of the first introduction paragraph, which caught me off guard as I thought you were still in the problem description zone. Generally, the first sentence of a paragraph should summarize the content of it or at least draw you into reading the rest of it. Your second paragraph, if it's introducing the solution, should *immediately start* with the solution, instead of a preamble about how it will be elaborated on or that it was discussed previously. This could be implemented in various places throughout the paper. The conclusion could be a little stronger and recap the ideas briefly. There were also some sentence fragments that could be rewritten into full sentences, mostly just for formality. Examples include:

- Needs some clean up in the "While in the industry" sentence
- Contradiction in "every IT department can relate to problems" but followed up with "these problems are specific to UMD as well."
- Try to avoid sentence fragments like "Often relying on word of mouth to find it."
- "Giving students something..." sentence needs rewriting. No need to make a qualification there.

Evidence: The research is used well, though it would help to give a little context when you use them. Put a name when you reference "your counterpart at Indiana Tech"---even the target audience might not be sure who you're referring to immediately. Who said the quote about "a large number of tickets"? Is that from an IT department?

Introduction: The problem is clearly relevant and important, though I would put more organization into the problems similarly to how you categorize your solutions. I'm seeing (1) students don't want to/are frustrated with calling IT and/or submitting tickets, (2) students don't know how to access existing resources, and (3) there aren't enough existing resources. I was confused for a while if you were trying to say that the problem was that the IT department was unresponsive, or slow, but only towards the end did you say that it was actually that students aren't *reporting*. Move that clarification to the introduction and problem description.

Solutions: The solutions are clearly defined and well explained. The more accessible documentation, the guides, the social media are all great ideas. There could be some better organization as mentioned in the *Overall Cohesion* paragraph, such as how you went back into the problem description zone while in the *Self-Help and Accessibility* section.
